

To make calls from your PC, install the PhonerLite app by double clicking the phoner.exe file. Once installed, start the application. When the application starts for the first time, you will be required to fill in some basic details. Firstly, fill the Proxy/Registrar box with the address provided in your welcome email (it will look something like: yourcompany.buzzbox.cc OR sip2.buzzbox.cc for single line customers) as per the screen grab below. Leave all other boxes blank and click the green next arrow:

The final step requires you to specify your account details. In the User name and Authentication name boxes, type your buzzbox phone number OR extension number. Often this starts with 4433 OR if you are a Cloud customer, you enter a valid extension number instead eg 6001. Secondly enter your account password. This is a secure password set by us, if you do not know it, get in touch with us and we will email it to you. If you are a Cloud customer, this is the extension password you set in your buzzbox dashboard.
